

### Also Available:

### The purpose of the game:

- To recreate the image on the picture card with 2 to 6 transparent cards.
- To recognise and use shapes and colours; to practice spatial awareness.

### Choosing the level of difficulty:

You can recreate the picture cards with 2 to 6 transparent cards. In the upper right corner you can read how many transparent cards you will need for that picture. The more you need, the more difficult it will be. So start with 2 and make it more difficult as you go!

### Preparation:

Take a picture card with your choice of difficulty level and put it in front of you on the table. Now take the transparent cards and scatter them over the table so that you can see them all. You can use the white plastic square in the box to build your picture in, so that the cards stay in place.

### The game:

- Study the picture card and collect the transparent cards you will need to recreate the picture.
- Decide which way to place the transparent cards. You can place them in any way, so a blue rectangle can be either water or the sky!
- Then figure out which card will have to go on the bottom. The coloured shapes hide everything that is underneath, so most of the time smaller shapes will have to go on top.

### An example:

If a bear is sitting on sand, then you put the sand down first and the bear on top. But if the bear is in the round bowl, then you'll have to put the bear down first and the bowl on top. Therefore the bear is not on the bowl but in the bowl.

### Tip:

If you succeed in recreating all the pictures on the cards, you can try creating your own pictures. In this way you can build your own world with shapes!
